

# ASSIGNMENT 8

SUBMITTED BY :

NAME : SAI KIRAN TADUR

NET ID : sxt161730

1) Given array,

2	2	-1	-1	3	-1	-1	6	7
0	1	2	3	4	5	6	7	8

2) Given,

0 to 5 as separate

Union(4, 5)

Union(3, 4)

Union(2, 3)

Union(1, 2)

Union(0, 1)

The resulting tree is ~~right~~ skewed.  
 i.e., each node has only one child resulting  
 in a long tree.

After Find(5).

returns 0.

$\text{union}(\text{find}(6), \text{find}(7))$

$\text{union}(\text{find}(1), \text{find}(5))$

$\text{union}(\text{find}(6), \text{find}(8))$

$\text{union}(\text{find}(5), \text{find}(8))$

$\text{union}(\text{find}(7), \text{find}(8))$

④ Array for the final forest,

-9	0	0	0	0	1	1	0	6
0	1	2	3	4	5	6	7	8

⑤ Union-by-height :

Union(find(0), find(2))

Union(find(0), find(3))

Union(find(0), find(4))

Union(find(0), find(7))

Union(find(1), find(5))

Union(find(6), find(8))

Union(find(5), find(8))

Union(find(1), find(8))

6) Array for the final forest,

1	-3	0	0	0	1	1	0	6
0	1	2	3	4	5	6	7	8

7) Given disjoint set array,

-1	0	0	2	2	1	1	5	5	8	9
0	1	2	3	4	5	6	7	8	9	10

The array after a  $\text{find}(10)$  if path compression is used,

-1	0	0	2	2	0	1	5	0	0	0
0	1	2	3	4	5	6	7	8	9	10

8) The trees for the final forest,
